## CONSTRUCTIONAL DETAILS

IPH Hydraulic Cylinders as per ISO 6020/2 : 2006 (E) are of COMPACT design and suitable for working pressure up to 160 BAR with the following construction details :

**BARREL:** Made from cold drawn seamless tubes and honed to a surface finish of 0.4 micron and higher.

**PISTON ROD:** Made from medium carbon steel, accurately ground, hard chrome plated super finished.

**COVER PLATES:** Fine machined from steel, and constructed with a sturdy design to withstand high pressure loads.

**GLAND:** Phosphor bronze bush inserted for smooth operation of the piston rod and for provided suitable guiding action.

**TIE RODS:** Made from high tensile steel rod tightened with hexagonal nut for easy maintenance.

**MOUNTING:** Various type of mounting are available according to the requirement ensuring complete interchangeability with other ISO standard cylinder.

**CUSHIONING:** Self aligning cushioning boss ensures alignment of the rod movement inside the cushioning chamber, providing accurate damping action at end of stroke.

**CUSHIONING SCREW:** For fine adjustment of cushioning movement.

**AIR BLEED:** Screw provided for releasing the air trapped in the cylinder.

### SEALLING ELEMENTS:

**PISTON SEAL:** Provided with one turcon Glydring™ for low friction, Stick / Slip free movement along with two turcite Slydring for conforms to ISO 7245/1.

**GLAND SEAL:** Polyurethane RU3 U-Cup™ seal is used, which has primary and secondary lip for maximum flexibility. Conforms to ISO 5597.

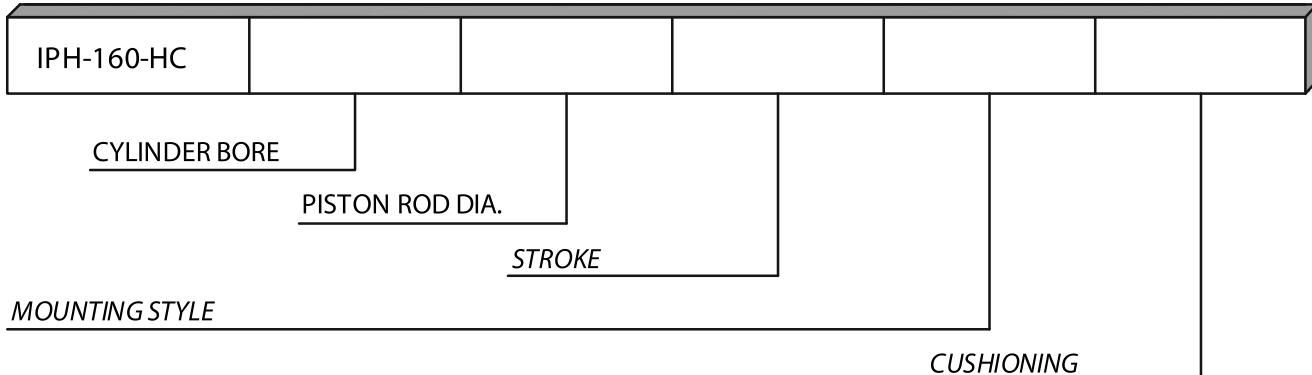

**WIPER SEAL:** DA-22™ Double Acting Polyurethane scraper is used conforming to ISO 6195 Type C grove dimensions. This wears resistant seal has a scraper lip which scrapes off the dirt completely from the Piston Rod, but leaves a residual oil film which is required for proper lubrication.

**STATIC SEALS:** Nitrile Rubber 'O' ring are used for static sealing purposes. They are used for the end seals, piston locking and cushioning seals.
